"Positive Thinking builds our Skills, boosts our Health, and Improves our Work"

About US

"Mainframe Systems Programming Expertise at your fingertips"

Founded in 2007, ERP Contact is a Romanian company with the head office in Cluj Napoca, the most important cultural center in Transylvania. The team is made up of professionals with excellent analytical, communication and project management skills. The technical knowledge gained over the last 13 years of working on the mainframe field and the capacity to perform system analysis, allows the ERP Contact team to design, develop and implement technology solutions that keeps the business safe and adds value to it.
Services

Support | Analysis | Programming | Design | | Testing | Development

ERP Contact is specialized in IT services and in the field of legacy applications running on IBM mainframe. We offer support, development and consultancy for one of the world's largest semiconductor supplier companies "On semiconductors" (headquarters in Phoenix Arizona,).

Application Support involves monitoring, analyzing and solving the system errors in real time, break fixes, small enhancements and customization of the application, help users and business analysts understand the logic behind the products they use. In other words we make sure the customer get what it needs to run their day to day business.

The **development** part involves doing large enhancements of the existing application and creating new modules with new functionality. For the implementation of a project the person assigned follows a document known as a software development life cycle (SDLC) which includes: analysis, design, high level estimate of the change, code change, testing and then the implementation of the new solution into the production environment.

We are currently working on the **migration** of this application to Oracle EBS. Our team is actively involved in the process of migrating and then in providing the support of the migrated systems (approximately 20% from the application is already migrated , i.e. Accounts Receivable, Accounts Payable, HR and Procurement modules). In order to be able to provide these services our team attended some Oracle PL/SQL courses and modules from the Oracle EBS package.

Mainframe Technologies:

- COBOL II,
- JCL,
- Assembler,
- Proterm,
- QuikJob,
- Eztrieve,
- IMS DB/DC, DL/I ,
- DB2,
- Vision report,
- MARK IV,
